

CANOPIES

Canopies provide safety and security to your facility while providing shelter to your security personnel and incoming motorists at access control points. As a part of your complete package of perimeter security products, Smith & Wesson provides canopies that fit into your desired sequence of operations, traffic engineering, likely threat scenarios and budget. Canopies provide your security personnel a safe place to check identification of incoming motorists and search vehicles, and provide a centralized location for security lighting and signals, CCTV equipment and ODDS. When complimented with additional barrier walls and/or bollards, canopies provide shelter than not only increases the safety of your personnel, but provides an effective and secure focal point for your entire facility.

OVERVIEW

- Seamless turnkey integration with existing ACPs and new sites
- Engineered structure and pre-engineered metal building systems available
- Multiple lane widths
- Meets Army Access Control Point Standard Definitive Design Criteria
- Custom lighting packages available including LED and other sustainable solutions
- Multiple ceiling and soffit option
- Standing seam and specialty roof and fascia systems available
- All column footings structurally designed and engineered
- All structural steel fabricated to ASTM & AISC standard
- All drainage systems include gutters and downspouts
- All components of canopy can be finished according to your specification
- Custom architectural and aesthetic options available during design stage
