

AMERISTAR® HIGH SECURITY FENCING

Traditional security fences are no longer enough to meet today's increased security demands. FutureNet Security Solutions is proud to partner with Ameristar, a leader in high security fencing, to provide the Ameristar Impasse® Security Fence as a solution to your high security needs. Impasse offers the resistive strength of heavy-duty steel spears secured vertically to a framework of specially-formed steel rails and I-beam posts. The stylish design of the Impasse, combined with its strength and security, provides a successful first line of defense. The structural configuration of the Impasse system not only delays aggressive attacks, but also allows for the seamless integration of additional security features such as anti-ram cables, sensors and alarm systems.

Impasse® is the first fence system of its kind designed to incorporate all forms of physical protection and detection equipment into a single solution. FutureNet Security Solutions can integrate the following additional products to solve specific security needs:

- The Stalwart Anti-Ram Cable System
- Vehicle Access Control Systems
- Barbed-Tape Helical Coil Toppings
- Intrusion Detection Sensors (IDS)
- Lighting Systems
- Closed Circuit TV Systems
- Access Control
